

## Contents

1	Introduction	11
2	Potential and Energy	20
3	Resistance	33
4	The Potentiometer and the Bridge	77
5	Electrolysis and Cells	96
6	Basic Electrostatics	109
7	Basic Magnetism	142
8	Capacitors and Inductors in a Circuit	164
9	Alternating Current	209
10	AC Demonstrations – the Cathode Ray Oscilloscope	240
11	Insulators and Semiconductors. Thermocouples	253
12	Diodes and Triodes	269
13	Electric Field Equations	299
14	Magnetic Flux	329
15	Magnetizing Coils and Magnets	358
16	Magnetic Materials	383
17	The Absolute Determination of Current and Resistance	400
18	Current Measuring Instruments	410
19	Applications of Electromagnetism	423
20	Electromagnetic Radiation and the Special Theory of Relativity	444
21	Conduction by Ionized Gases. The Electron	458
22	The Quantum Theory. Photocells and the X-ray Tube	472
23	Electrons in the Atom	488
24	Radioactivity	506
25	Nuclear Reactions	538
26	Cosmic Radiation and Particle Accelerators	554
	Answers	566
	Index	571
